

Agnivesh

SUMMARY

BCA student passionate about software development, full-stack technologies, mobile applications, and building practical digital products.

PROJECTS

Pixel Racer — Pixel-Art Racing Game | An interactive top-down 2D racing game built with Python and Pygame, supported by a web interface for player profiles, track selection, and leaderboard functionality.

- Time Trial mode
- Race Bots
- Multiple tracks
- Vehicle movement and rotation
- Collision detection
- Camera following
- DRS speed zones
- Speedometer HUD
- Minimap
- Lap timer
- Leaderboard integration
- SQLite database
- Flask backend integration
- Multiplayer/LAN functionality has also been explored/tested where appropriate.

Student Performance Analyzer | Project focused on analyzing student performance data.

- Student data analysis
- Performance metrics
- Data visualization
- Identifying academic trends
- Providing useful insights from student records

Weather Application | A weather application built to practice API integration, asynchronous data retrieval, frontend development, and presenting real-time weather information through a clean interface.

- API integration
- Weather data retrieval
- Dynamic UI
- Responsive design

Footwear E-Commerce Web Application | A web application created to practice frontend development and e-commerce interface design.

- Product display
- Product cards
- Categories
- Responsive layout
- Navigation
- Shopping-oriented UI

Digital Ration Shop / PDS System | An early-stage system concept exploring how digital technologies could improve the Public Distribution System and make ration services more accessible and transparent. (Concept / WIP)

- Online ration booking (proposed)
- Digital transactions (proposed)
- Stock availability (proposed)
- Family account linking (proposed)

- Subsidy information (proposed)
- Delivery support for senior citizens (proposed)
- GPS-based ration shop locator (proposed)
- Aadhaar-based authentication concept (proposed)
- Demand prediction concept (proposed)

TECHNICAL SKILLS

C++

Java

Python

PHP

HTML

CSS

JavaScript

React

React Native

Django

Flask

Streamlit

SQLite

APIs

Git/GitHub

REST APIs

VS Code

Pygame

LangChain

EXPERIENCE & LEARNING

BCA Student; Full-Stack Development Training (practical exposure, not formal employment); participation in multiple hackathons; Top 5 finish in first hackathon; 2nd place in another hackathon; completed multiple technical assignments and built applications while learning different technologies.

ACHIEVEMENTS

Top 5 — Hackathon; 2nd Place — Hackathon; Multiple Technical Projects; Full-Stack Development Training.

CURRENT FOCUS

Currently learning/exploring/building/improving in full-stack development, backend development, API integration, mobile application development, building portfolio projects, improving problem-solving skills, and exploring new technologies.
